Transform provisioning and identity management

Reimagine how your users authenticate to the Mac

Binding to an Active Directory domain was a great solution to solve authentication issues for 20 years. But in an age of increasingly mobile devices, passwords and clocks get out of sync, DNS records aren't always available externally, and being a member of an Active Directory domain can be a challenge.

Enter Jamf Connect.

Jamf Connect relieves the binding and gives you the flexibility to leverage local users controlled by the same policies and controls you depend on from a directory service or identity provider.

See how Jamf solves your authentication conundrum

Jamf Connect (formerly NoMAD Pro, NoMAD Login+ and NoMAD PKINIT) allows for simple provisioning of users from a cloud identity service during an Apple provisioning workflow, complete with multi-factor authentication:

AUTHENTICATION PLUGIN
Login at the LoginWindow with synchronized Active Directory or Okta credentials.

SMART CARDS
Customers will benefit from being able to kerberize against Active Directory using a Smart Card on the Mac.

ACCOUNT CREATION
Create local accounts based on Active Directory or Okta identities and keep passwords in sync with those in the directory service.

CLOUD MULTIFACTOR
Use supported Okta multifactor methods at the LoginWindow.

	NoMAD	Jamf Connect
	Unleash your Macs with the power of NoMAD, a seamless way to sync accounts in environments that leverage Active Directory	With key identity provider integrations, Jamf Connect is the best way to manage accounts and authentication in organizations that leverage Okta or Smart Cards
